

## SECURE YOUR SOFTWARE ACROSS ALL ENVIRONMENTS

### SECURITY INNOVATION, SECURES YOUR SOFTWARE ACROSS ALL ENVIRONMENTS

Web, Cloud, AI, IoT, mobile, desktop, and more. We deliver precise, actionable security solutions with zero false positives, so you can confidently and efficiently protect your products. Backed by decades of expertise and as part of Bureau Veritas, we seamlessly integrate world-class software security into your development process, protecting the way you build and deliver products.

- Focused on Application Security Risk:**  
 Since 2002, we have been solely focused on helping organizations mitigate application security risks across a wide range of platforms and technologies.
- Decades of Experience:**  
 Our deep expertise in security assessments enables us to provide comprehensive security services that go far beyond traditional tech-enabled solutions.
- Comprehensive Approach:**  
 From penetration testing to secure SDLC assessments, we provide a full range of services to protect your applications and cloud environments from modern threats.

## WHY SECURITY INNOVATION

- Secure Your Software Process, Application, & Deployment** - Safeguard your entire software lifecycle—whether it's on the Web, Cloud, IoT, mobile, or desktop—with industry-leading protection tailored to your technology and deployment environment.
- Directed Software Security Actions** - Go beyond scanning tools—Eliminate security noise with precision-driven actions—zero false positives and clear remediation guidance—ensuring you swiftly and effectively secure your products.
- Work with the Experts** - Partner with pioneers in software security since 2002. As part of Bureau Veritas, global leaders in Testing, Inspection, and Certification, Security Innovation brings unmatched expertise to secure your systems.

## OUR SERVICES

### Penetration Testing

Our penetration testing services cover a wide range of technologies, including web, mobile, IoT, and cloud. We conduct exhaustive tests that simulate real-world attacks to identify and address vulnerabilities before they can be exploited.

### Code Review

We go beyond automated scanning with manual code reviews that combine smart automation and expert inspection. Our security engineers provide detailed reports that include threat analysis and remediation recommendations, ensuring your applications are free from exploitable flaws.

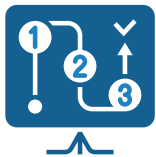

### Cloud Configuration Review

Securing cloud environments requires deep expertise in architecture and deployment. We offer comprehensive cloud security services across AWS, Azure, and Google Cloud platforms. From cloud planning and migration to risk management and secure operations, we make sure your cloud infrastructure is resilient and protected from misconfigurations.

### Secure SDLC & Architecture Assessments

Our secure software development lifecycle (SDLC) assessments provide risk reviews, gap analyses, and architecture validation. We help you optimize your SDLC processes and ensure that security is built into every phase of your software's lifecycle.

### Tabletop Exercises

Our scenario-based tabletop exercises are designed to help your teams navigate potential cybersecurity threats. Participants work through custom scenarios relevant to your organization, building defenses and enhancing preparedness through real-time exercises.

## ABOUT SECURITY INNOVATION

Security Innovation is a leader in software security, providing comprehensive solutions to secure software from design to deployment, across all environments, including Web, Cloud, IoT, mobile, and desktop. With a commitment to delivering precise and actionable security with zero false positives, we empower organizations to protect their products confidently and efficiently. Leveraging decades of expertise and as part of Bureau Veritas, a global leader in Testing, Inspection, and Certification, we seamlessly integrate world-class security into development processes, safeguarding the way companies build and deliver products.
